

• AVAILABLE FOR INTERNSHIPS

PREM VAIDYA

Electronics & Telecommunication Engineering student
dedicated to exploring the intersection of hardware and
intelligent automation.

01. BACKGROUND

Engineering student with a passion for innovation.

I am a first-year Electronics and Telecommunication Engineering (ENTC) student at **MIT Academy of Engineering (MITAOE)**. My journey is fueled by a strong interest in technology and problem-solving.

Currently, I'm building my foundation in electronics and communication systems, aiming to bridge the gap between theoretical concepts and real-world practical applications through hands-on projects.

▣ ACADEMIC FOCUS

First-Year B.Tech

2025 - Present

MIT Academy of Engineering

Electronics and Telecommunication (ENTC)

Actively participating in robotics clubs and electronics labs to refine technical prototyping skills.

02. TECHNICAL ARSENAL

My Core Competencies

Focused on developing a strong technical foundation at the beginner level.

Embedded Systems

Arduino & Microcontrollers

BEGINNER

Circuit Design

Hardware logic & PCBs

BEGINNER

Sensors

Integration & Data processing

BEGINNER

Programming

C, C++ & Problem Solving

BEGINNER

03. IMPLEMENTATIONS

Featured Projects

*From conceptual circuits to working prototypes —
exploring the future of IoT and automation.*

Hydrosmart Irrigation

An automated system designed to optimize water usage in farming through real-time moisture sensing.

Embedded Sustainability Sensors

Motion Sensing Alarm

Advanced security system utilizing PIR sensors to detect intruders and trigger instant alerts.

Security Hardware Logic

Rain Sensing Windows

Smart home automation that detects precipitation and autonomously secures window mechanisms.

Automation Mechatronics

04. CONNECT

Let's discuss your next project.

I am currently looking for summer internships and collaborative projects in embedded systems and hardware design.
